**Attachments:** image001.jpg

Hey team,

We have a new version of the TubeUploader!

---

What's new in Verison 1.05:

- Added "Banned words" feature. Title, Tags and Description now block the word list (rape|murder|blood|child|incest|beastiality|bleed|vomit|puke|scat). This list can be extended with the Flashvars.bannedWords property.
- Contains the code for segment-categorieS for ExtremeTube (this was in the previous version, but it wasn't really mentioned). This one will require some QA testing.

For the FlashVars.bannedWords, use the following pattern if required:

Word1|word2|word3

This will be injected in the hardcoded list, becoming something like (rape|murder|blood|child|incest|beastiality|bleed|vomit|puke|scat|word1|word2|word3)+, so everything will be checked accordingly. Yes, you can get funky with the RegExp, but don't overdo it.

If anyone thinks that's dangerous, I could have the values separated by a coma (",") instead & replace it with a "|" in the code later on.
